

Customer Demographics Overview

This dashboard provides a high-level view of customer distribution, churn, and revenue impact. Out of 7043 total customers, 1869 have churned, resulting in a churn rate of 26.54%. Monthly revenue stands at \$456K, while revenue loss due to churn is \$139.13K (30.5%). Gender distribution is balanced, and most customers are young citizens. Customers without partners and dependents form the majority of churned users.

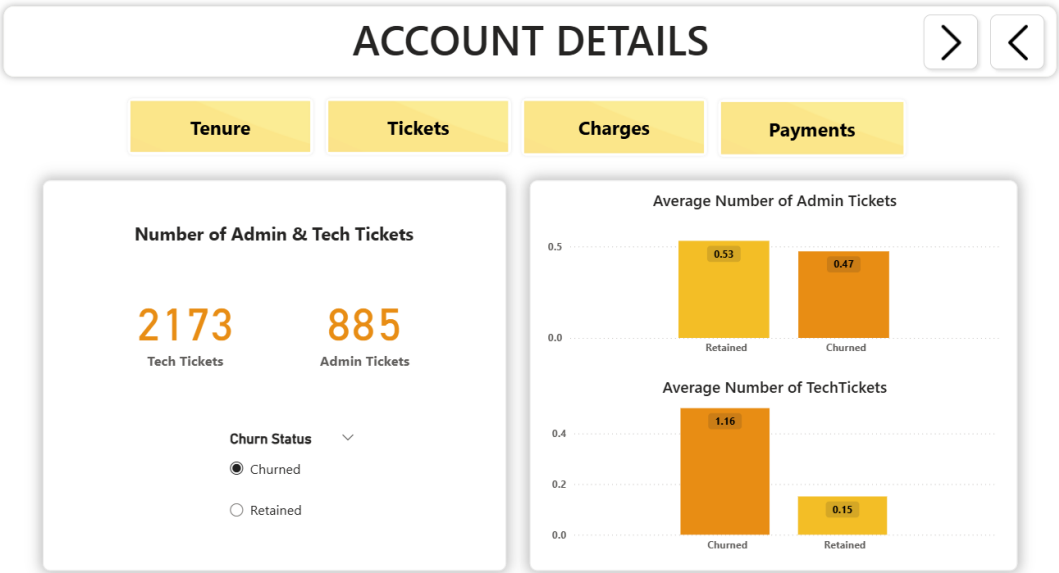

Contract & Tenure Analysis

Month-to-month contracts show the highest churn rate (42.71%), indicating instability. Customers with longer contracts have significantly lower churn. Retained customers have an average tenure of 37.57 months, while churned customers average only 17.98 months.

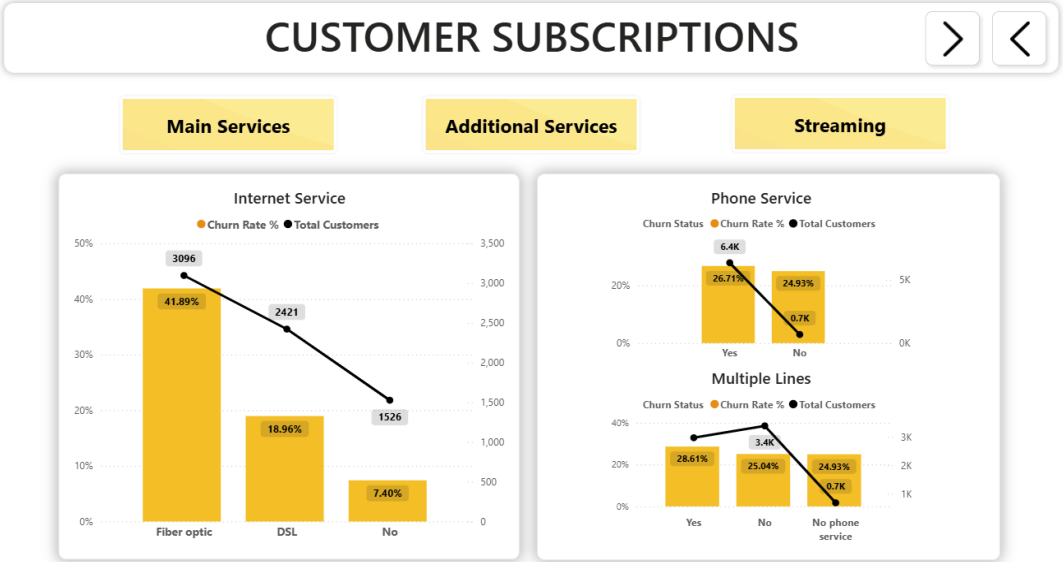

Support Tickets Analysis

Churned customers raise more technical tickets compared to retained customers. This suggests unresolved technical issues play a major role in customer churn.

Service Subscription Impact

Fiber optic users experience the highest churn rate among internet services. Customers without internet services have minimal churn, showing service complexity influences churn.

Streaming Services Effect

Customers without streaming services churn more frequently. Streaming TV and Movies act as retention factors when bundled with internet services.
